The Sicilian Dragon: Yugoslav Attack (B 78)

Ivan Markovic
Chess Informant Editor

The very thought of facing the sharpest lines of the Yugoslav Attack used to bring trepidation to most players until the mid-nineties (remember, even Kasparov successfully tried his hand at the Sicilian Dragon in his New York championship match against Anand in 1995). However, with the benefit of hindsight we can now state that the tables have turned and that most of the ambitious players revel at launching (Yugoslav) attacks (no second thoughts, please) – no one seems to be so obliging about letting Black off the hook nowadays.

In the early days of the system (1. e4 c5 2. Nf3 d6 3. d4 cd4 4. Nd4 Nf6 5. Nc3 g6 6. Be3 Bg7 7. f3 0-0 8. Qd2 Nc6 9. Bc4 Bd7 10. 0-0-0), Black's reply 10... Rc8 was almost without exception an automatic choice. One can hardly argue that deploying Black's queenside Rook to the half-open c-file seems most natural; however, even in the early days, 10... Qb8 was considered a viable alternative: Black's queen makes way for the kingside Rook, at the same time hoping to push the b-pawn. Led by Belarus GM Alexei Fedorov's capable hand, Black players seemed to thrive in the ensuing complications until it became clear that White should immediately try to exploit the weakness of the e7-pawn by playing 11. Nd5 (for instructive examples, the reader is referred to footnote 1). An unexpected modification of the idea came with the immediate 10... b5!?, where Black still hopes to play the familiar sequence: Ne5, followed by Qb8 and R(f)c8. Then again, it didn't take long to find a reliable antidote in 11. Nc6! (aimed against Ne5), which more or less closed the chapter.

Move by move, Black's choices have been whittled down to the last possible resource: 10... Rb8 (footnotes 36-40). This seemingly awkward crossover probably offers more hope than any other Black's choice at the moment: supported by a major piece, the b-pawn becomes ever-ready to march, whereas Black still holds his trumps by keeping both his queen and the c6-knight flexible. The idea gets a surprising twist after the logical retreat: 11. Bb3 is met by 11... Na5! Chess Informant 86 brings GM Golubev's novelty (12. Bh6 Nb3!?N – footnote 38), which actually prevents White's lasting initiative obtained by GM Felgaer against GM Ward in Port Erin 2002 (footnote 39). However, since it is most likely that White players will sooner or later seek a refutation of the above-mentioned line, I'd venture to suggest yet another idea for Black: an old and almost forgotten game from the '75 Hungarian Championship (Sax – I. Bilek, Hungary (ch) 1975 – 20/456) led by transposition (Black's original choice in the game was 10... Na5) to the very same position as in the Felgaer – Ward game. Personally, I'd highly recommend the predecessor's choice (footnote 40) with a slight adjustment: 18... Rb6 instead of the original 18... Bb5 seems to equalize effortlessly. While I'm not quite certain of the longevity or the soundness of the move, 10... Rb8 definitely justifies its current
